## Firefox ActiveX Plugin Instruction

---

### 1. Download and install Plugin

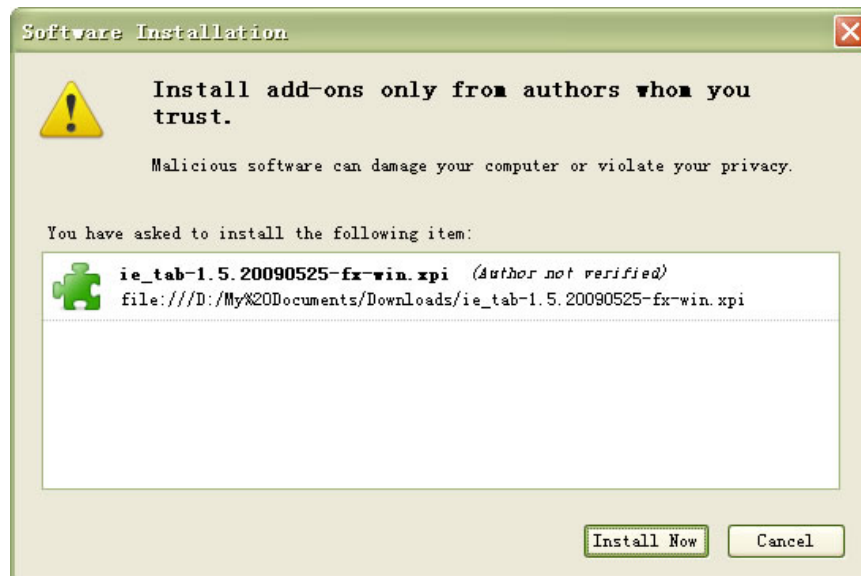

Firefox browser not support ActiveX controller it self, so we need download a plugin and make the Firefox support it.

The plugin name is: IE Tab

Download address: <http://ietab.mozdev.org/>

After download, we get a file named "ie\_tab-1.5.20090525-fx-win.xpi"

Open the Firefox, and drag the plugin file to Firefox window directly, and Firefox will popup a dialog:

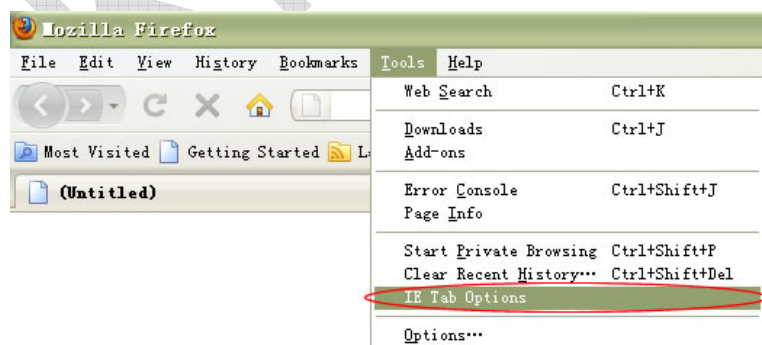

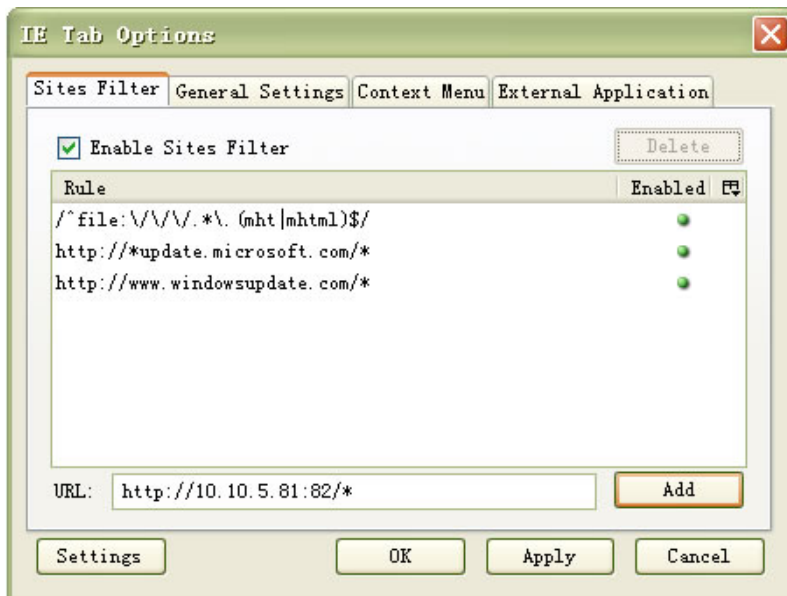

Click "Install Now" for start install, after installation, it will ask for restart Firefox.

### 2. Plugin setup

After installation, we need add our target address to IE Tab before we start access DVR web client.

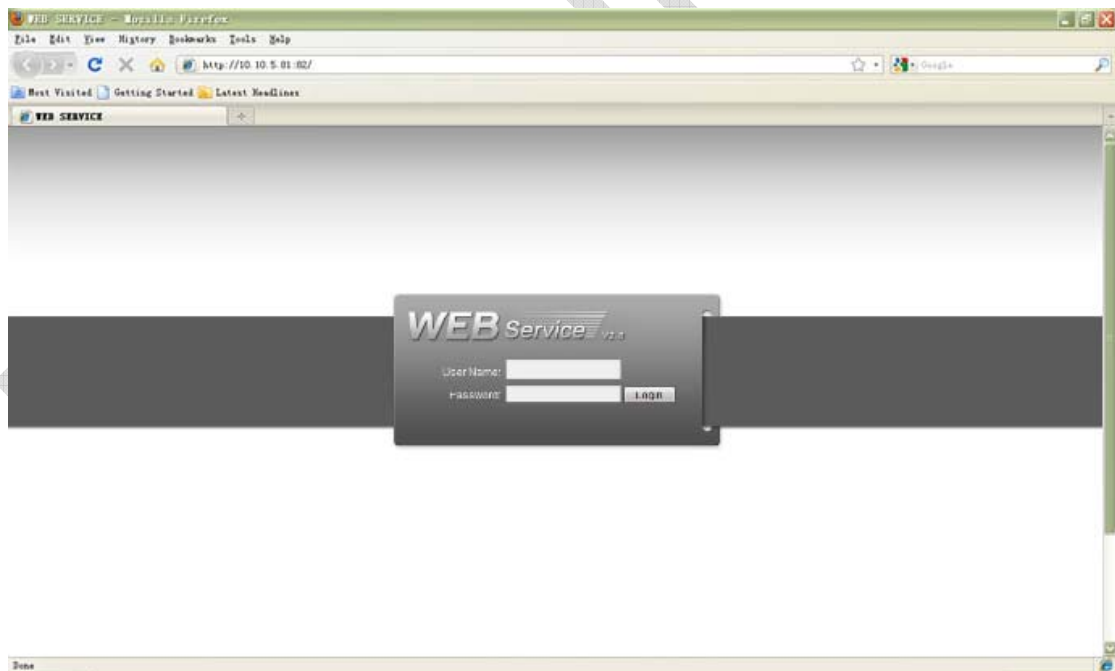

Run Firefox, and open "IE Tab Options" window by "Tools -> IE Tab Options".

As here, my DVR address is “<http://10.10.5.81:82>”, so type “<http://10.10.5.81:81>” to the URL option. **Note: it is need to add “/\*” at the end of my address.**

Setup completed, type “<http://10.10.5.81:81>” to Firefox address editor and type enter, it will show our DVR web client login menu.

### 3. Download and install Firefox.

We can download the Firefox browser from [www.firefox.com](http://www.firefox.com).

And the latest version is 3.5.2

After download, please install as normal steps.
